

## Medication Management / Dispenser

### Purpose

Seniors rely on their medications to keep them healthy, but complex medication schedules can lead to mistakes: missing doses, taking incorrect amounts, or taking medicines at the wrong times. A Medication Dispensing Service is designed to reduce the health risks associated with medication errors.

### Real case

Maria (78) has more chronic diseases, thus she has a complex medication schedule. She has to take five different pills a day with different dosages. As Maria suffers from a mild age-related dementia, she often misses to take one or more of the essential pills, that results in dramatic worsening in her condition. The smart Medication Dispenser warns Maria to take her medication on time, and dispenses the right pills according to the prescription/dosage.

### How to use the Medication Dispenser

Medication Dispenser is a simple way to handle even complex medication regimens. The medication dispenser automatically dispenses medication at pre-programmed times. And if the medication is not taken the dispenser will notify a caregiver.
