

# SA-V-E. PROJECT: SAFETY OF ELDERLY PEOPLE AND VICINITY ENSURING

## Technology enabling & training

### Purpose

The purpose of this service is that after installing the devices (for example - the sensor kit, making / checking the internet connection, etc.) and installing the necessary applications on smartphones in support of the SAVE system, there will be training on how to use this system the users - elders, relatives, caregivers.

### Real case

Distributors (for example, municipal social services, social service providers, IOT Smart-home stores) provide installation instructions, help with installation, and test the system. They provide training for testing them at home and on the go. Participants will learn how to use location systems that will help them safely return home.

They are included in a teamwork, they test the functionalities of the system and they do practical activities. During these sessions, supervised by volunteers, they also completed the behavioral questionnaires (personalized, for safety and ethical reasons).

### How to use the SAVE service

After installing the sensor kits, testing the internet connection, installing applications on the smartphone, it is done: training on simple technological devices for the elderly, professional caregivers, companies for the care of the elderly - for example. wearable bracelets that monitor fitness or facilities that make home activities safer (preventing house fires); training on communication with groups of colleagues and with local social and health authorities (for example, with smartphones and tablets); localization and routing training. A user manual is provided, which will also be available online.
